Address

1/60, Mariamman Kovil
Street, Villupalayam,
Cuddalore, TamilNadu -
605007

Education

2017-2021

**B.E. (Electronics and
Communication Engineering)**

Jeppiaar Engineering College

CGPA: 8.19

2025-2027

M.Tech (AI - ML)

Bits Pilani

Language

English

Tamil

Key Expertise

- Microservices Architecture
- Cloud-native Application Development
- Distributed Systems
- API Design & Development
- CI/CD Automation
- Kubernetes Workloads
- Backend System Scalability

SATHISH

Backend Python & DevOps Engineer

Backend Python & DevOps Engineer with 5 years of experience designing and building scalable backend systems and microservices using FastAPI, Django, and Flask. Experienced in AWS cloud, Docker containerization, Kubernetes orchestration, and CI/CD automation. Skilled in building distributed systems, real-time processing pipelines, and cloud-native deployments.

Experience

2023(July) - Present

Rheo AI, Chennai

Backend Developer/ Devops

- Developed an authentication microservice using FastAPI and PostgreSQL, implementing RBAC and JWT-based authentication for secure API access.
- Migrated a monolithic Flask backend to a scalable microservices architecture using FastAPI, improving modularity and maintainability of the platform.
- Built a real-time application processing pipeline using AWS SQS and Kubernetes Jobs to handle distributed background tasks efficiently.
- Designed and implemented monitoring and alerting infrastructure, integrating OpsGenie for real-time incident detection and operational response.
- Automated CI/CD pipelines using GitHub Actions, managed infrastructure with Terraform, and implemented Ansible-based deployments to streamline application delivery.

2021(July) - 2023(Oct))

iLink Digital, Chennai

Software Engineer

- Developed microservices using Flask-RestX integrated with a Service Bus messaging system for an AI-powered video processing platform.
- Built a video annotation tool using Python Tkinter and MongoDB, improving dataset collection efficiency by 35% for AI image classification models.
- Implemented heartbeat monitoring and metric collection for containerized applications, integrating Elasticsearch for centralized logging and analytics.
- Configured Azure CI/CD pipelines and Kubernetes orchestration for scalable deployment of AI processing services.

2021(April) - 2021(June)

iLink Digital, Chennai

Intern

- Worked on Python automation and web development training projects.
- Built a Django-based social media application implementing authentication, JWT tokens, image posts, comments, and friend management features.

Tech Stack

- **Languages:** Python , JavaScript
- **Databases :** NoSQL - Elasticsearch , MongoDB | SQL - Postgres
- **Containerization and DevOps :** Docker, Kubernetes, CI/CD, Ansible, Terraform
- **Dashboards :** Kibana, Grafana
- **API Frameworks :** Flask , FastAPI and Django
- **Cloud Stacks :** AWS
